

FRANCIS

Inter
seed 

Francis is a very early potato variety with a light yellow flesh color. Presprouted and covered with foil, it can be harvested at the end of June with excellent frying colors. Because of the long to long oval tuber shape and early high dry matter contents it is ideally suited for early processing to French Fries.

SOME INTERESTING FACTS ABOUT FRANCIS:

- Presprouted and covered by foil will allow very early harvest
- Rapid early growth
- No problems with youth sugar
- Stable dry matter content
- Low risk for bruising
- Resistance against nematodes Ro 1, 4 (9)

Maturity: very early. **Tuber Shape:** long to long oval shape with shallow eyes, light yellow skin and flesh color. **Processing:** Ideally suited for processing to French Fries, mealy cooking type.
Yield: high.
